POWERED BY EYETRAFFIC™

# accessGUARDIAN™

POWERED BY EYETRAFFIC™

Introducing **accessGUARDIAN** from ANPR International. With the advent of Automatic Number Plate Recognition (ANPR) camera technology, the world of vehicle flow management is being transformed. **accessGUARDIAN** is a fully integrated automatic vehicle flow management and reporting system that integrates data captured from ANPR Cameras with a range of linked devices, ancillary equipment and **eyeTRAFFIC** software.

## WHAT IS eyeTRAFFIC?

**eyeTRAFFIC** is a dynamic web based platform that has a range of application specific modules designed to meet the requirements of monitoring and managing vehicle movement.

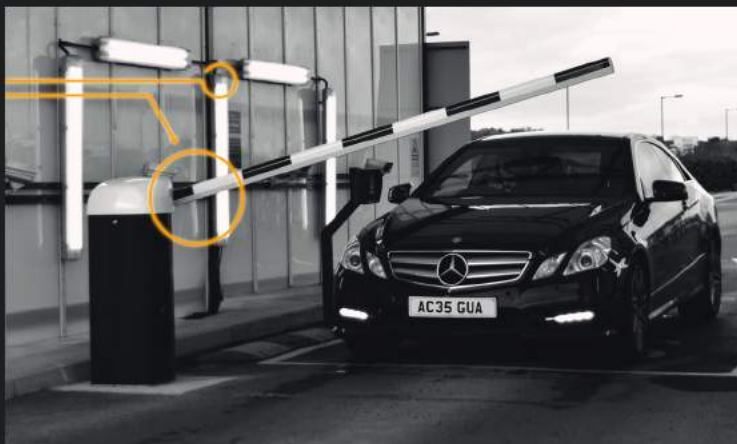

## Our range of applications currently supported include:

- Car Park Management
- DVLA Tax Check
- Vehicle Flow Management
- Traffic Surveys
- Security Monitoring
- Access Control
- Speed Monitoring
- Moving Traffic Enforcement - No Through Route Enforcement

## WHAT IS accessGUARDIAN?

**accessGUARDIAN** is for those that require the ultimate access control and monitoring. Our digital ANPR system provides the most robust and secure means of controlling entry, exit and traffic flow within a private car park, service yard or secure storage area, without impeding the free-flow of authorised vehicle movements.

The ANPR camera system has direct control over any barrier or automatic gate. It is able to determine at a distance of up to 15 metres if a vehicle approaching the automatic barrier is authorised to enter or exit the controlled area. If the vehicle is authorised/unauthorised the barrier/gate will be controlled automatically to either allow or deny entry/exit.

**accessGUARDIAN** is not only a way to manage the vehicles that enter/exit your car park, but it is also a cost effective way of reallocating staff duties as it makes manual barrier control a thing of the past.

## KEY BENEFITS OF accessGUARDIAN?

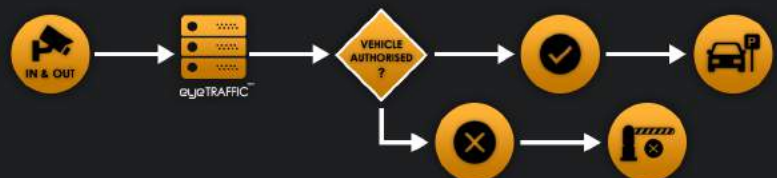

- Deny access to blacklisted vehicles
- Control traffic flow in your private area
- Searchable database of all vehicles entering/exiting
- Save money on static staff controlling a manual barrier

Traffic monitoring is also a key feature of our **accessGUARDIAN** application, the ANPR cameras log the movement of every vehicle entering and exiting through the controlled areas, providing a searchable record of up to 25,000 registrations detailing the date, time and location along with a high resolution image of the vehicle.

## HOW DOES IT ALL WORK?

**accessGUARDIAN** links directly to the **eyeTRAFFIC** server. The server holds details of all vehicles that are either white listed or blacklisted, allowing **accessGUARDIAN** to determine which vehicles can or cannot enter or leave the controlled area.
